What Does AWS Organizations do?

Central Management

AWS Organizations allows you to manage multiple AWS accounts at once. You can create groups of accounts, and then attach policies to a group to ensure the correct policies are applied across the accounts. Organizations enables you to centrally manage policies across multiple accounts, without requiring custom scripts and manual processes.

What Does AWS Organizations do?

Control Access

With AWS Organizations, you can create Service Control Policies (SCPs) that centrally control AWS service use across multiple AWS accounts. You can specifically Allow or Deny individual AWS Services. For example you could deny the use of Kinesis or DynamoDB to your HR group within your AWS Organization. Even if IAM in that account allows it, SCP will override it.

What Does AWS Organizations do?

Automate AWS Account Creation

You can use the AWS Organizations APIs to automate the creation and management of new AWS accounts. The Organizations APIs enable you to create new accounts programmatically, and to add the new accounts to a group. The policies attached to the group are automatically applied to the new account.

What Does AWS Organizations do?

Consolidated Billing

AWS Organizations enables you to set up a single payment method for all the AWS accounts in your organization through consolidated billing. With consolidated billing, you can see a combined view of charges incurred by all your accounts, as well as take advantage of pricing benefits from aggregated usage, such as volume discounts for Amazon EC2 and Amazon S3.
